1. Introduction

In today's fast-paced healthcare environment, efficient management of patient records, appointments. This proposal outlines the development of a Medical Clinic Management System to streamline clinic operations, enhance patient experience, and improve overall efficiency.

2. Project Objectives

The proposed system aims to:

- Automate Patient Management: Maintain detailed patient records, including medical history, appointments, and prescriptions.
- Enhance Appointment Scheduling: Allow online appointment booking, reducing wait times and improving patient flow.
- Secure Data Management: Ensure confidentiality and security of patient data through authentication and encryption.
- Support Multi-User Access: Provide role-based access for doctors, nurses, receptionists, and administrators.

3. System Features

A. User Management

- Admin panel for managing users (user - admin).
- Role-based access control.

B. Appointment Management

- Online appointment scheduling.
- calendar view for better scheduling.

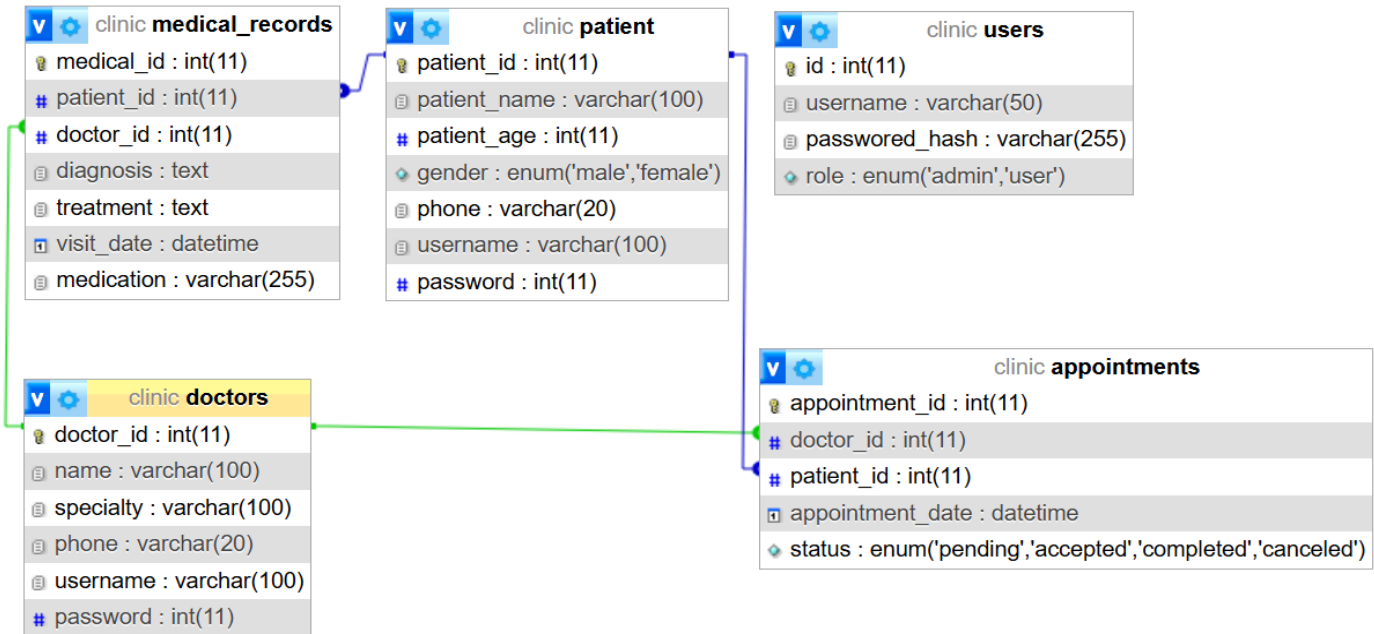

C. Patient Records

- Secure storage of patient medical history.
- Easy retrieval and update of records.

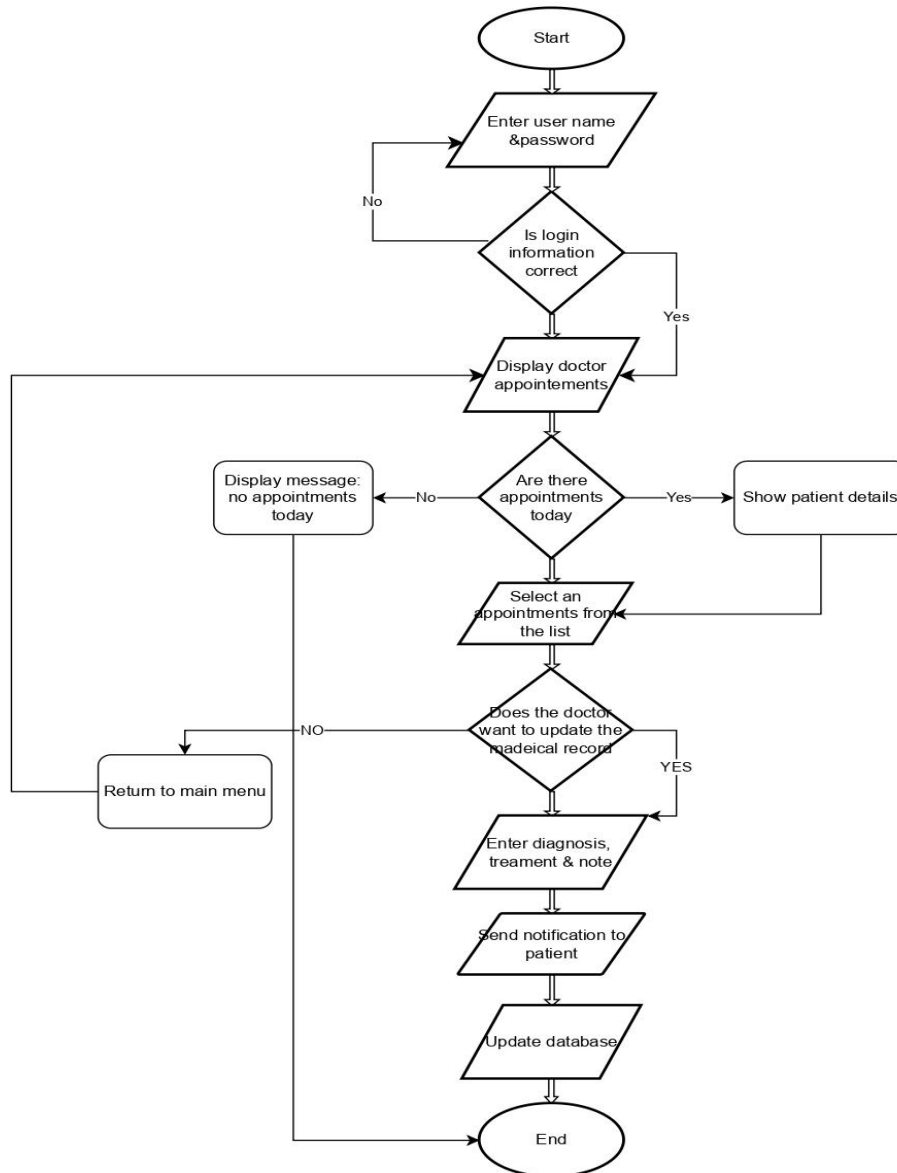

4. Technology Stack

- Backend: php
- Frontend: HTML, CSS, JavaScript (Bootstrap)
- Database: MySQL
